$\qquad$

1. Camy out the following metric to metric conversions: (3 pts)
a. 48.5 mL to Liters
b. $\quad 0.00712 \mathrm{~g}$ to mg
c. $\quad 1.47 \mathrm{~kg}$ to grams
2. Cary out the following English to metric conversions using the conversion factors below: (3 pts)
a. 14.9 oz to $\mathrm{grams}(453.6 \mathrm{~g}=1.00 \mathrm{lb})$
b. 5 ft 6.5 inchesto meters ( $2.54 \mathrm{~cm}=1.00 \mathrm{inch}$ )
c. 42.0 feet to meters ( $2.54 \mathrm{~cm}=1.00 \mathrm{inch}$ )
3. Camy out the following metric to English conversions using the conversion factors below: (6 pts)
a. 709 cm to feet $(2.54 \mathrm{~cm}=1.00 \mathrm{inch})$
b. $65 \mathrm{~cm}^{3}$ to fluid ounces ( $8 \mathrm{oz}=1 \mathrm{cup}, 4 \mathrm{c}$ ups $=1$ quart and $1.06 \mathrm{qt}=1.00 \mathrm{~L}$ )
c. 989 g to ounces $(16 \mathrm{oz}=1 \mathrm{lb}, 2.205 \mathrm{lb}=1.000 \mathrm{~kg})$
4. Solve the following density problems: ( 6 pts )
a. Mercury has a density of $13.5 \mathrm{~g} / \mathrm{mL}$. What volume in liters would be occupied by 5.00 lbs of mercury ( $453.6 \mathrm{~g}=1.00 \mathrm{lb}$ )
b. The density of a ir is $1.2 \mathrm{~kg} / \mathrm{m}^{3}$. What is the mass in kg of the a ir in a room that is 3.0 meters from floor to ceiling and 4.0 meters wide and 5.0 meters long?
C. An empty graduated cylinder has a mass of 31.856 grams. 24.7 mL of an unknown liquid are placed into the graduated cylinder giving the conta iner with the liquid a mass of 50.035 grams. Calculate the density of the unknown liquid.
5. Perform the temperature conversions indic ated: (2 pts)
a. $56.7^{\circ} \mathrm{F}^{\circ}{ }^{\circ} \mathrm{C}$
b. $-35^{\circ} \mathrm{C}$ to ${ }^{\circ} \mathrm{F}$
