## Stoic hiometry Problems

$\mathbf{2 N a}(\mathrm{s})+\mathbf{2 H}_{\mathbf{2}} \mathrm{O}_{(\mathrm{l})} \rightarrow \mathbf{2 N a O H}_{(\text {aq) }}+\mathbf{H}_{\mathbf{( g}(\mathrm{g})}$

1. If 90.0 g of sodium are dropped into excess water, how many liters of hydrogen gaswould be produced at standard pressure and $22^{\circ} \mathrm{C}$ assuming all of the sodium reacts?
$4 \mathrm{Al}_{(\mathrm{s})}+\mathbf{3 O}_{\mathbf{2 ( g )}} \rightarrow \mathbf{2 A l}_{2} \mathrm{O}_{3(\mathrm{~s})}$
2. If 100.0 g of aluminum is oxid ized completely, how many grams of aluminum oxide would be produced?
$\mathrm{SnO}_{2(\mathrm{~s})}+\mathrm{C}_{(\mathrm{s})} \rightarrow \mathrm{Sn}_{(\mathrm{s})}+\mathrm{CO}_{2(\mathrm{~g})}$
3. How many liters of carbon dioxide would be produced at standard pressure and $25^{\circ} \mathrm{C}$ for every 1.00 kg of tin produced?
$\mathrm{Cu}_{(s)}+2 \mathrm{AgNO}_{3(\text { aq })} \rightarrow \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2(a q)}+2 \mathrm{Ag}_{(\mathrm{s})}$
4. 5.00 grams of copper are placed into 300.0 mL of a 0.20 M solution of silver nitrate. How many grams of silver are produced? Does any unreacted copperremain?
$2 \mathrm{Fe}_{(\mathrm{s})}+3 \mathrm{H}_{2} \mathrm{SO}_{4(\mathrm{aq})} \rightarrow \mathrm{Fe}_{2}\left(\mathrm{SO}_{4}\right)_{3(\mathrm{aq})}+\mathbf{3 H}_{2(\mathrm{~g})}$
5. If a balloon is to be filled with 5.0 L of hydrogen at standard pressure and $20^{\circ} \mathrm{C}$, how many mL of 0.3 M sulfuric acid are needed and how many grams of iron are needed. (Assume the reaction has a $92 \%$ yield).

## $\mathbf{2} \mathrm{KClO}_{3(\mathrm{~s})} \rightarrow \mathbf{2 K C l}_{(\mathrm{s})}+\mathbf{3 O}_{\mathbf{2 ( g )}}$

6. If 10.0 grams of potassium chlorate are heated until no more oxygen is released, how many grams of potassium chloride will remain in the reaction vessel?
